BOAT BUILDERS <> NEW ZEALAND

EXCELLENCE IN ALLOY

Q-West Boat Builders were selected in mid 2020 to refit Aria with HamiltonJet's new hybrid system. Aria was constructed by Q-West in 2007 and is a 15 m aluminium foil assisted catamaran.

The modifications were substantial and involved the total reconfiguration of the vessels driveline, installation of electrical components and the fabrication of a fire protected battery compartment.

HamiltonJet's Electro Hybrid Drive, or EHX system, offers a totally integrated propulsion system that provides all the benefits of jet propulsion with seamless transition from electric to diesel.

Q-West's installation of the hybrid system and the supporting items required for operation has enabled us to collect accurate data for future electric or hybrid vessels.

Q-West has been a long standing customer of HamiltonJet, installing more jet units in New Zealand than any other builder. HamiltonJet's quality, support and commitment to development has ensured our strong relationship will continue.
